

Take Control of Third-Party Risk with Intelligence-Led TPRM

- ◆ Uncover Vendor Threats
- ◆ Secure Your Ecosystem
- ◆ Automate Risk Detection

Continuous Risk Detection Across Your Vendor Ecosystem

Continuous attack surface monitoring that delivers up-to-date intelligence on third-party exposures, enabling informed decisions, faster remediation, and measurable risk reduction.

Identify

Uncover risks and threat signals related to third parties from proprietary deep and dark web sources.

Monitor

Continuously evaluate third parties, creating dynamic risk profiles allowing to identify and prioritize high-risk vendors.

Mitigate

Receive enriched intelligence, contextual and prioritized recommendations to drive faster mitigation.

Predict Risk Before It's Exploited

The predictive score reflects the likelihood of an attack, using CTI and external indicators such as threat trends, industry sector, and geographic exposure.

Align Third-Party Risk with Compliance Standards

Support compliance efforts by continuously monitoring vendor adherence through standardized and customized questionnaires. Capture critical security and regulatory data, ensure alignment with internal policies, and track responses across frameworks like NIS2, DORA, and ISO 27001. All while maintaining a clear audit trail

See Your Network the Way Attackers Do

Identify both known and unknown assets through an attacker's perspective. External infrastructure across third parties is mapped from the outside in, exposing potential entry points and high-risk surfaces visible to adversaries.

Key Features

Designed to support large, diverse vendor ecosystems, the platform delivers key capabilities that make third-party risk management more efficient, flexible, and scalable

Agentless Architecture

Instant, safe access using just a domain. No installation or setup required.

Multi-Tenant Environment

Manage multiple organizations or business units from a single, centralized platform.

Downloadable Reports

Export portfolio, vendor cyber risk, and compliance insights as PDFs or editable DOCX files for easy sharing and customization.

Score Trends

Track risk score changes over time across your entire portfolio and individual vendors to monitor progress and emerging threats.

Dashboard View

Access in-depth insights with dedicated dashboards for portfolio, vendor, and compliance monitoring.

ROSE AI

conversational AI assistant for enriched risk context, faster investigations, and guided remediation.

Real-Time Alerts

instant email notifications on critical risk changes and emerging threats.

Asset Blacklisting

Easily blacklist any domain to exclude unwanted or irrelevant assets from your monitoring scope.

Risk List & Intelligence

View top and full risk lists by type and severity, including vulnerabilities, exposed credentials, and ransomware activity—enriched with technical, dark web, and ransomware intelligence for comprehensive threat detection.
