

Stay Ahead of Threat Actors with Real Time Adversary Intelligence

- ◆ Unify threat actor personas
- ◆ Prioritize high risk actors
- ◆ Track evolving TTPs and campaigns

Understand the Adversary To Stay Ahead

Threat actors constantly evolve their tactics and infrastructure, making it critical for security teams to know who they are, how they operate, and who they target. KELA's Threat Actors module unifies scattered traces from across the cybercrime underground into enriched profiles, giving clear visibility into threat actors and their motivations, tools, and activity so you can anticipate and disrupt attacks.

Discover & Monitor

Continuously discover and track threat actors across underground sources, merging their personas into a single profile.

Analyze And Prioritize

Enriched actor profiles with history, relationships, TTPs, and sectors help you quickly assess relevance and risk.

Investigate And Act

Use timelines, original posts, and analyst insights to drive investigations and guide proactive defense.

Track threat actor activity from first appearance to active campaigns

Discover new threat actors in underground communities

Observe interactions and capability building

Track campaigns targeting your sectors

Continuously monitor for new aliases, infrastructure, and TTPs

Comprehensive intelligence on threat actors

Receive near real time insight on threat actors targeting your organization so you can proactively defend against their operations.

Deep understanding of threat actors

KELA provides deep visibility into threat actors in one place, consolidating multiple online personas into a unified view so you can clearly see who stands behind campaigns and how they operate.

Context-Rich Intelligence For Prioritization

KELA combines its data lake with expert analysis to enrich threat actor profiles, highlighting activity history, preferred TTPs, target sectors, and links to related actors so analysts can quickly see relevance and risk.

Investigation-ready workspace

KELA provides an intuitive interface with actor profile cards and activity panels, so analysts can pivot from actors to related posts, leaked data, and infrastructure and export findings into SIEM, SOAR, and case management tools.

Key features

Actor search filters

Quickly find threat actors by aliases, handles, contacts or wallets, and filter by geography, sector and threat type.

AI summaries

Generate on demand summaries of actor activity to speed up understanding and reporting.

Unified actor profiles

View each actor's personas, activities and relationships in one consolidated profile.

Latest finished intel

See the latest finished intelligence and assessments for each threat actor profile.

Investigation workspace

Work with profile cards and activity panels that link directly to original posts and evidence.

MITRE ATT&CK TTPs

See MITRE ATT&CK mapped TTPs for each threat actor.

Featured actors spotlight

Use KELA curated lists of high priority actors and campaigns that need immediate attention.

API integration

Enrich internal systems with actor intelligence through streamlined API integration.
